# PITCH DECK FOR UDAAN WELFARE FOUNDATION

BY NIKHIL & SWAPNIL ROUL, TEAM ROUL

## PEER BASED LEARNING

### Benefits:

- Developing sense of responsibility, leadership qualities of a student.
  - Better time-management skills.
  - Better communication skills.
- Establishing a **peer tutoring program** where older students assist younger students. For Example, Class 8th students can assist students from classes 5th, 6th and 7th.
  - The organization will train senior students on course materials and teaching methodologies.
  - It can be **motivating for students** to learn peer-to-peer, as they feel more comfortable asking questions and seeking clarification from their peers.
  - **Critical thinking** is enhanced when concepts are discussed with peers. Through dialogue and debate, students are prompted to evaluate and analyze information, leading to a **deeper understanding of the subject matter**.

# FEASIBILITY

- Cost Effective

- Books are available via donations, Other support materials are available online for free.
- Developing or adapting curriculum materials to support peer-based learning may require initial investments.
- Overhead costs such as arranging workspace for the students are dependent on the schools in the program being implemented. The usual classroom is big enough for small group study.

- Minimal Work force necessary

- After the initial training of senior students, the employees/volunteers don't have to invest much time besides overseeing in-class progress, to make sure the learning is progressing without a hitch.
- Mentoring by school teachers will also help to address the lack of a workforce, develop relationships between students and teachers, and create a sense of community within the school

# COLLABORATION

- Considering the lack of workforce at the moment, it is recommended to form partnerships with local schools or collaborations with certain organizations that are experts in such methods.
- One such organization is [Involve Learning Solutions Foundation](#). A Bangalore-based IIT Madras social start-up, it has impacted more than 7000 students across the 3 states of Bihar, Karnataka, and Tamil Nadu since its establishment in 2017.
- They offer open-source content, with a tutorial guide on how to use the resources to make peer based learning more effective.
- Udaan can form a partnership with Involve, and share their workforce comprising of Volunteers and Interns to deploy such program effectively.

## VOCATIONAL EDUCATION AND TRAINING

### Benefits:

- Increases employability
- Provides a hands-on learning

- Early exposure to vocational skills helps students become **more aware of various career options**. It allows them to explore and understand different industries, making informed decisions about their future careers.
- Vocational education emphasizes real-world applications of knowledge. Students **learn how their skills directly relate to various professions**, making the learning experience more meaningful and applicable.
- Hands-on learning in vocational programs often leads to **increased student engagement**. Learning by doing can be more motivating and enjoyable for students compared to traditional classroom instruction.

# FEASIBILITY

- Can be costly.
  - Costly infrastructure and equipment, depending on vocational program
  - Cost of materials and supplies.
  - Maintenance and upkeep of these equipment are additional costs.
- Skilled personnel required.
  - With workforce lacking, it's necessary to have some sort of expertise in order to teach the kids in these skills. Skilled trainers will cost considerable amount of money
- Start small and scale up
  - To manage costs, consider starting with a smaller-scale vocational program and gradually expanding based on the success and sustainability of the initiative.

**THANK YOU**
